

1 CONFERENCING SYSTEM HAVING AN EMBEDDED WEB SERVER,
2 AND METHODS OF USE THEREOF

3
4 ABSTRACT OF THE DISCLOSURE

5 A videoconferencing system includes an embedded web
6 server and a network interface for connecting the videoconfer-
7 encing systems to a network. Computers and other devices on
8 the network may manage and control various operations of the
9 videoconferencing system through a conventional browser inter-
10 face by accessing web pages transmitted by the embedded web
11 server. In addition, users of network-connected computers may
12 upload presentation files to the videoconferencing system to
13 enable transmission of presentation slides to remote confer-
14 ence endpoints. The videoconferencing system may also be pro-
15 vided with an integrated network hub to allow connection of
16 the videoconferencing system to one or more local computers.
